

CLAIMS

What we claim and desired to be protected by a United States Patent:

1. A finger positioning guide for finger placement used by a player for a guitar or bass having a elongated neck, said neck having a top side and a plurality of strings and frets along a fingerboard on the top side of the neck comprising:

a. a base strip having a length and width of flexible ferrous magnetically receptive material element with or without magnetic polarity and self-adherent by means of adhesive backing attached to the top side of the neck adjacent to the fingerboard spanning across the entire length of the fingerboard and;

b. an overlaying strip that covers the base strip having a length and width of flexible magnetic material with or without magnetic polarity with denoted information to play musical scales of different keys that are being sounded by the instrument when a string depression is made at a corresponding location on the fingerboard and;

c. said strip having at least one finger-positioning marker.

2. The finger positioning guide of claim 1 further comprising a plurality of finger positioning markers for the purpose of sounding musical scales.

3. The finger positioning guide markers of claim 2 further comprising markers having annotation

for indicating the finger position, and said annotation is at least one means selected from the group comprising color, letter, and number.

4. The finger positioning guides printed material adhered to magnetic strip material of Claim 1 of the instruction element may be comprised of paper, high quality photo, glossy matte paper and/or vinyl.

5. The finger positioning guides printed material of Claim 4 shall not be transparent and shall not be comprised of polyvinyl chloride for such purpose as to act as cling vinyl.
